

NIST CSF 2.0-DE.CM-01-Ex2

DETECT (DE): Possible cybersecurity attacks and compromises are found and analyzed
Continuous Monitoring (DE.CM)

Assets are monitored to find anomalies, indicators of compromise, and other potentially adverse events

DE.CM-01

Networks and network services are monitored to find potentially adverse events

Ex2

Monitor wired and wireless networks for connections from unauthorized endpoints

Vendor: Cisco Meraki

Comments: By ingesting wired network logs and wireless network logs it is possible to discern these types of events. However, it is likely these events are vendor specific, and likely not translated to specific UDM fields. This would require research and custom queries to be successful.

Note: This is a Cisco Meraki specific query. This query is based on the elements in the SecOps parser for authorization. However, as Meraki also makes firewalls, this could also find firewall events (not just wired or wireless) events that resulted in blocked action.

While syntactically correct, this query has not been tested. This would need to be tested against a Meraki switch/wifi infrastructure.

UDM Search Query:

```
$hostname = $e.principal.hostname  
$hostname = /.*/  
$hostname != ""
```

```
$e.metadata.log_type = "CISCO_MERAKI"  
$e.security_result.action = "BLOCK"
```

```
match:  
    $hostname
```

```
outcome:  
    $block_count = count($e.metadata.id)
```

```
order:  
    $hostname
```
